

ALBINS

OFF ROAD GEAR

Press Release June 5th 2010

Albins Off Road Gear is proud to announce a development partnership with Australian Supercar manufacturer JOSS Developments.

The two companies have formed a partnership to develop a state-of-the-art transmission for the new production version of the JOSS (code named the JOSS JP1). The seven-figure development program will produce an Australian first ... with never-before-seen levels of technology.

Albins has been carefully selected by the JOSS engineering team for its capacity to manufacture leading edge components and systems measurable to any other in the world.

"There is been a lot of development work being carried out by our engineering team behind the scenes and the transmission partnership with Albins is one of several exciting developments that JOSS will be announcing over the coming months, JOSS Developments Limited CEO, Glenn Draffin, said.

"This new transmission will set the standard and is a key component in JOSS' plans to build a 360km/h supercar..."

"The high technology in the up-coming JP1 is a perfect fit for Albins. We have been following the development of the production car, and have been in talks with JOSS Developments Limited for some time now, and are proud to finally be able to announce our partnership with this very professional team," Albins Off Road Gear, Director Steve MacDonald, said.

The Prototype JOSS Supercar has enjoyed the status of being the 5th fastest production car on the planet on it's unveiling at the 2004 Melbourne Motor Show. The 2010 version of the vehicle is expected to place the car in the top 3 fastest accelerating production cars on earth.

"SHIFT TO A NEW LEVEL"
